**DETAILED ACTION**

1. This is in response to the communications filed on 29 December 2008.
2. Claims 2, 4-12, 16, 18-20 and 22-26 are pending in the application.
3. Claims 2, 4-12, 16, 18-20 and 22-26 have been allowed.
4. Claims 1, 3, 13-15, 17 and 21 have been cancelled.

***Allowable Subject Matter***

5. Claims 2, 4-12, 16, 18-20 and 22-26 are allowed.

The following is an examiner's statement of reasons for allowance:

The current application is directed towards a remote controller device sends its own ID code when specifying an access destination to a main device. Upon receipt of an access command from the remote controller device, the main device appends the ID code of the remote controller device to information obtained by accessing the access destination and outputs the same. The remote controller device takes in the output only when it is appended with its own ID code and displays the same on a display unit. Thus, the user can confirm the information the main device has obtained from the network on the display unit of the remote controller device. Consequently, the risk that the information is seen by anyone around can be reduced, thereby making it possible to improve the security on the private information.

The closest reference to the current application is Ballantyne, Jr. et al U.S. Patent No. 5,867,821 B1 (hereinafter Ballantyne). Ballantyne is directed towards the distribution and administration of medical services, entertainment services, electronic medical records, educational information, etc. to a patient's individual electronic patient care station (PCS) interconnected to a master library (ML) which stores data in digital compressed format, through

a local medical information network. The patient/medical personnel interact with this medical information network through the unique PCS and receives the requested service or data from the master library. The data is then displayed either on the associated television set or video monitor or through wireless/IR communications to a peripheral personal data assistant (pen based computer technology). The data for text, audio, and video information is all compressed digitally to facilitate distribution and only decompressed at the final stage before viewing/interaction.

However, there are differences between the Ballantyne reference and the current application. Ballantyne does not disclose that "the main device is configured to be connected to a second display operable to display the obtained information". Moreover, Ballantyne does not disclose that "the main device determines whether the second display displays the obtained information based on the display switching signal sent from the remote controller device". Ballantyne is directed to a system for accessing and distributing personal health care information and services in hospitals and homes. Ballantyne discloses that master library 2 consists of a number of computer servers that are each dedicated to a specific function. Ballantyne does not, however, expressly or inherently disclose that any of these computer servers are "configured to be connected to a second display operable to display the obtained information". Ballantyne does not disclose that "the remote controller device further includes a display disabling section that disables the first display to display the sent information when the appended identification code is not in conformity with the stored identification code".

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
